

Study for Teens with and without ADHD

The Olin Neuropsychiatry Research Center - Institute of Living/Hartford Hospital is looking for right-handed teenagers (age 12-18) with and without ADHD to participate in a non-invasive fMRI brain imaging study.

Qualified volunteers will participate in **interviews**, **brain and memory testing**, **2 noninvasive brain scans**, and **5 weeks of executive working memory training**.

This training is being explored as a potential intervention to help with symptoms of ADHD.

Volunteers will be compensated \$20 per hour of their time (16-20 hours expected) and additional compensation for completing the study.
