

Webinar Description - June 1, 2016

*Linking Curriculum, Instruction, and Assessment in Mathematics*

Presenter: Jennifer Michalek, Mathematics Education Consultant, CSDE

During this webinar, participants will use the Smarter Balanced Assessment in mathematics to realize the connections between curriculum, instruction, and assessment. By understanding the design of the assessment, educators can ensure that students are adequately prepared. This webinar will enable participants to examine the components of the blueprints and gain an understanding of how those components impact curriculum and instruction. The claims, targets, and depth-of-knowledge will be viewed through the lens of curriculum and instruction so that educators can take what they learned and use it as a catalyst to reflect on their own practice.
